

Reaction time

works during operation

Consumption

25 ml per 1 L

Application field

for use in all water cooled,
closed cooling systems

Application interval

on demand

Application

- 1) Check the coolant level.
- 2) Add the product to the warm cooling system. Move all heater controls to "hot".
- 3) Let the engine idle for approx. 10 minutes.
- 4) Check the coolant level again and test if the sealing was successful.

Attention: Open radiator filling port slowly and successively – risk of burning! Do not overdose! Sufficient for cooling systems up to 12 L capacity

Description

Bayerol radiator stop leak is for use in all water cooled, closed cooling systems (commercial vehicles, passenger cars, industrial heat exchangers). Reliably seals critical hairline cracks and small leaks – quick and easy.

Advantages

The major part of the chemical energy that is bound in the fuel is converted into heat during the combustion process which must be dissipated. Therefore, a fully functional cooling system is of major importance for the operational liability of engines! Helps to avoid expensive repair works. Prevents from loss of cooling liquid and protects against engine damage.
