

**Reaction time**  
works during operation

**Consumption**  
50 ml for 10 L

**Application field**  
for use in all diesel engines

**Application interval**  
with every tank filling

**BAYEROL DPF-Cleaner** is the most economical way to maintain and clean particulate filters. Suitable for all diesel engines and miscible with all diesel fuels, filter cleaning takes place during operation. Filter cleaning is carried out without removal, downtime, or disruptions.

## FEATURES:

- Suitable for all diesel engines
- Miscible with all diesel fuels
- Permanent and complete filter cleaning during operation
- No removal
- No downtime
- No disruptions
- Reduces the ignition temperature of the collected soot in the diesel particulate filter.

## APPLICATION

Please strictly follow the dosage instructions! Add to the diesel fuel immediately before filling the tank. Recommended application: every 3 months. Do not overdose!
