

Premium coolant

Properties

BAYRO COOLANT RM -36°C B18 is an antifreeze based on ethylene glycol, free of potentially harmful substances such as nitrites, amines and phosphates. Due to an optimal combination of inhibitors based on carboxylic acid technology as well as silicates and borates (hybrid coolant), **BAYRO COOLANT RM -36°C B18** guarantees powerful and long-lasting corrosion protection for extended coolant life. Further additives prevent the coolant from foaming, provide the right cavitation protection and prevent deposits. **BAYRO COOLANT RM -36°C B18** offers year-round, maintenance-free frost and overheating protection due to a higher boiling point. The coolant has no negative influence on coolant hoses or cylinder head gaskets.

Application notes

BAYRO COOLANT RM -36°C B18 is used as a cooling and heat transfer fluid in combustion engines, regardless of whether engines are made of cast iron, aluminium or a combination of both metals and in cooling systems made of aluminium or copper alloys. Mixing **BAYRO COOLANT RM -36°C B18** with other radiator protection agents or products of other manufacturers is not recommended.

Caution: Observe manufacturer's instructions and use concentration of min. 33 vol.%.

Service description

Recommendation*:

- 2G
- BMW LC-87
- Deutz-Fahr (<03/2017)
